Client tier overview ✓

What is a web server? ✓

What is HTML? ✓

What is CSS? ✓

What are JavaScript and Ajax? ✓

What are web frameworks?

Web frameworks are groups of prebuilt web components and patterns that can be used to make web programming easier and more organized. By using a web framework, you can significantly decrease the amount of effort required to build a web application. Some web frameworks provide features, such as user security. Many allow you to make your web application configurable.

Examples of web frameworks in the Java programming language are the Spring Framework, JBoss Seam, Apache Wicket, Apache Click, Apache Tapestry, and Apache Struts.

Examples of web frameworks that are available in the PHP programming language include CakePHP, CodeIgniter, and the Zend Framework.

An example of a web framework that are available in Javascript programming language is Express.js.
